

WMT-ALU-Workboats

Using the Bow-Door--Boat
ABB6700KH
as a refuse-boat on the
old river Danube in the city of
vienna

There is an additional high-pressure fire-fighting equipment which is also usable to spray special chemicals on the water to absorb an oil-film. With the bow-mounted portable crane this type is also usable as a salvage-vessel

With a load of 400 kg in the bow it is still possible to work with the open bow-door.

All boats are build with tight welded double floors, which carries more than the cross-weight
