

WMT-Crane-float for the Neusiedler-lake

The compact design allowed us to load the whole construction on one truck.

length = 11,5m
width = 8,5m
weight of constr. 10 t
draught: 0,3 - 0,5m
max. load: 10 t

The mounting of this zinc-coated steel-construction on the two aluminium floats was possible in two days

WMT-Crane-float for the Neusiedler-lake

With the special designed hand-chain gearbox is it possible to pull the complete float out of the water by hand. In this working position there is a protected area between the floats.

Only in working-conditions the crane-float will be equipped with a mobile office- and staff-container.

Two 40 hp outboard engines drive the crane-float to its working places.
